

Grant or deny access to shared catalogs

(This feature is only available for Daminion Team Server version!)

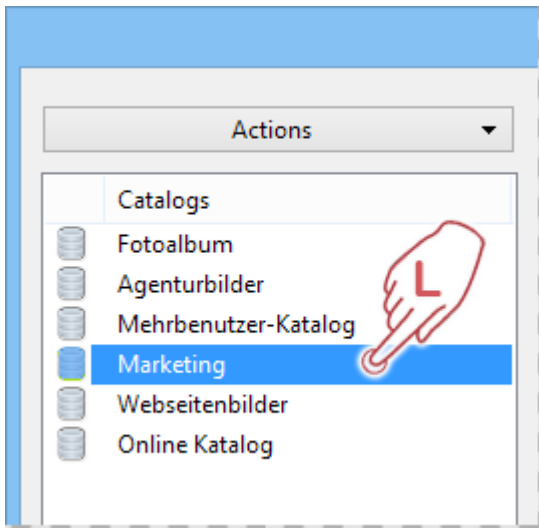

You can selectively grant or deny access to any of the Daminion catalogs for specific users. This helps you to specifically control the catalog use within your organization structure at the user level.

Grant or deny access to a shared catalog for specific users

Open the Daminion Server Panel and click on **“Administration“** and then on **“Catalogs...“**

In the following catalog selection list, double click on the catalog that you wish to lock or unlock.

In the Catalog settings window navigate to the tab “Users”. Here you can select the user for which you want to grant or deny access to the catalog.
