# Grant or deny access to shared catalogs

*(This feature is only available for Daminion Team Server version!)*

You can selectively grant or deny individual user access to any of the Daminion catalogs. This gives you precise control over the way the catalog is used within your organization structure at the user level.

## Grant or deny specific users the right to access a particular shared catalog

Open Daminion Server Administration Panel, click **Administration** and then **Catalogs**

In the following catalog selection list, double click the catalog that you wish to lock or unlock for a particular user.
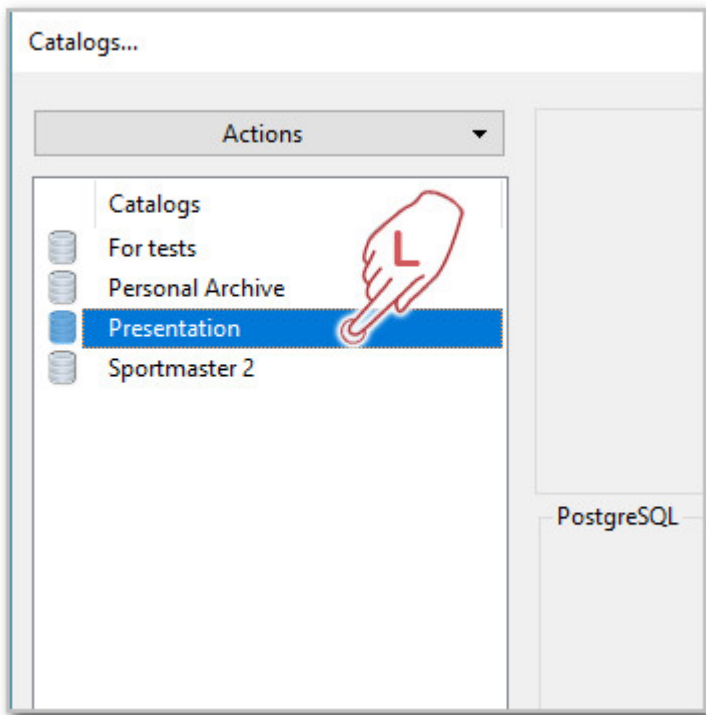

In the Catalog settings window, navigate to the **Users** tab. Select the user you want to grant or deny access, click **"Change user role for his catalog"** and from the drop-down list select **Deny Access.**
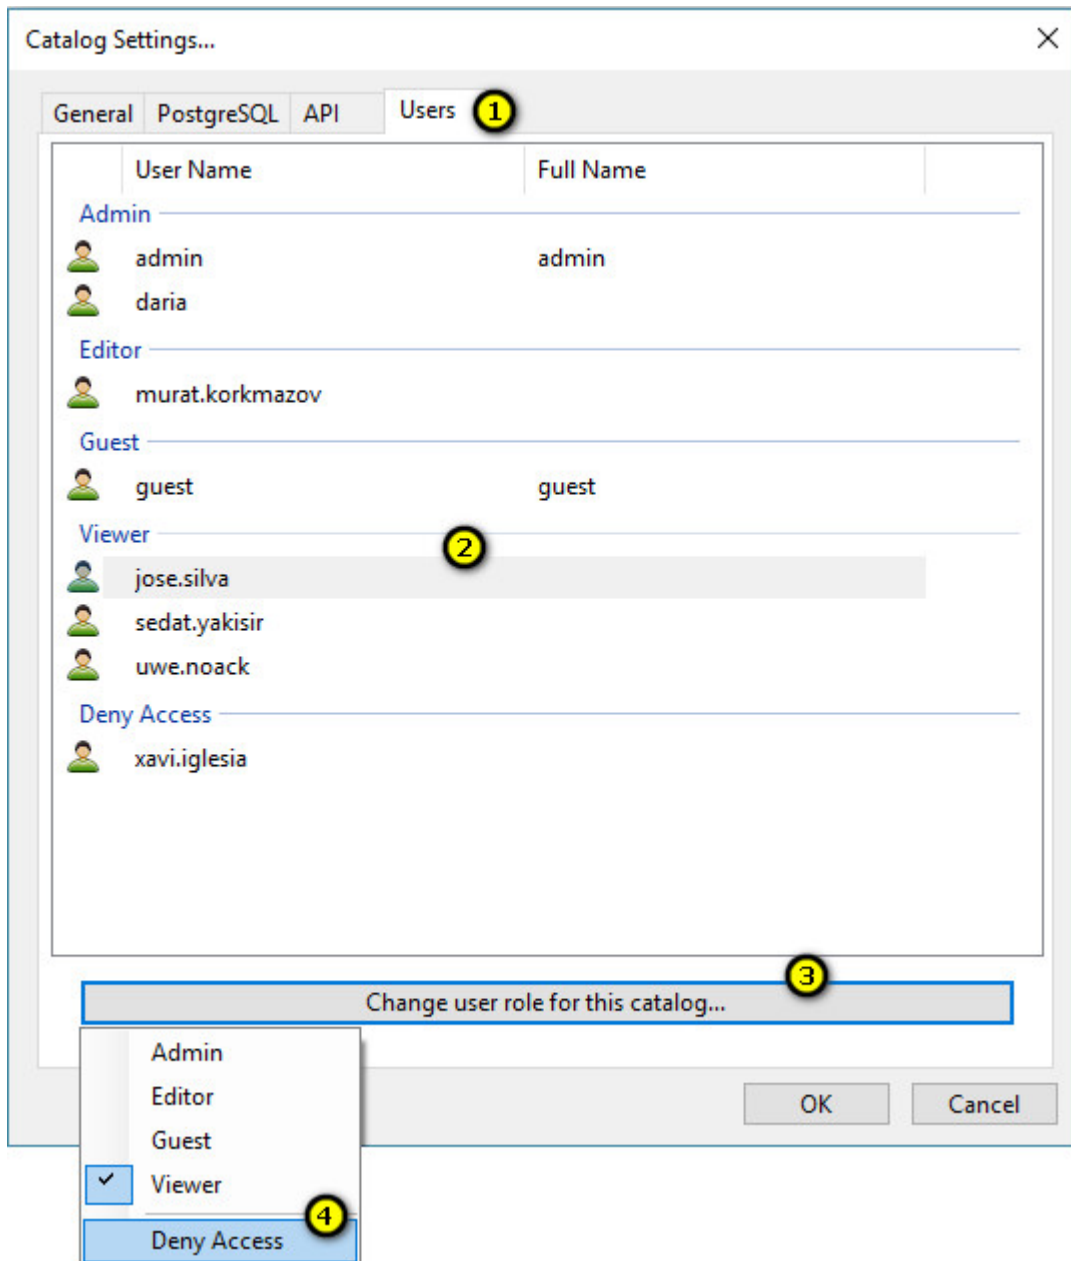

In the same way you can change the access permissions at the user level any time for each catalog.
